Patented system to ensure maximum bioavailability

The EVOcharge rotates the water at 2'000 revolutions per minute and thus ensures the highest drinking pleasure. This rotational force creates an association of vibrating water molecules in the same direction, which is called a coherence domain.

Consequently, the water clusters are reduced and the inner surface of the water is increased. The water gains in conductivity, solubility and natural vitality. The cells of our body absorb the refined water directly. This makes water the most effective thirst quencher.

An additional plus point is the improved taste of the water after refinement. The increase in hydrogen bonds has a positive effect on the surface tension of the water. The water appears lighter and clearly more digestible in taste.

The EVOcharge is based on our patented rotation process and ensures soft, oxygen-rich and cell-available water.

Operating principle

The EVOcharge is based on our rotation process

EVOcharge's unique algorithm and specifically designed geometry ensure the best possible treatment of incoming water.

Water is set into circulation directly by its entry force into the EVOcharge by means of the rotating nozzles, whereby it is rotated by its own force at around 3,000 revolutions per minute. This has amazing and extraordinary effects on the water.

Based on scientifically proven effects, such as the Bernoulli, Piezo, Dollop and Lenard effects and physical forces, such as the Lorentz and magnetic hydrodynamic force, the high-quality effect of the EVOcharge results.

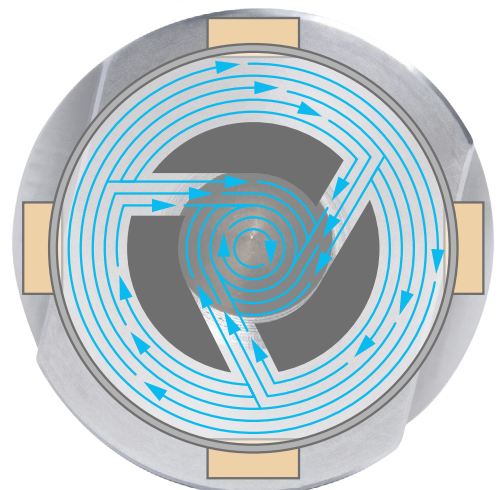

Inspired by nature – developed for you

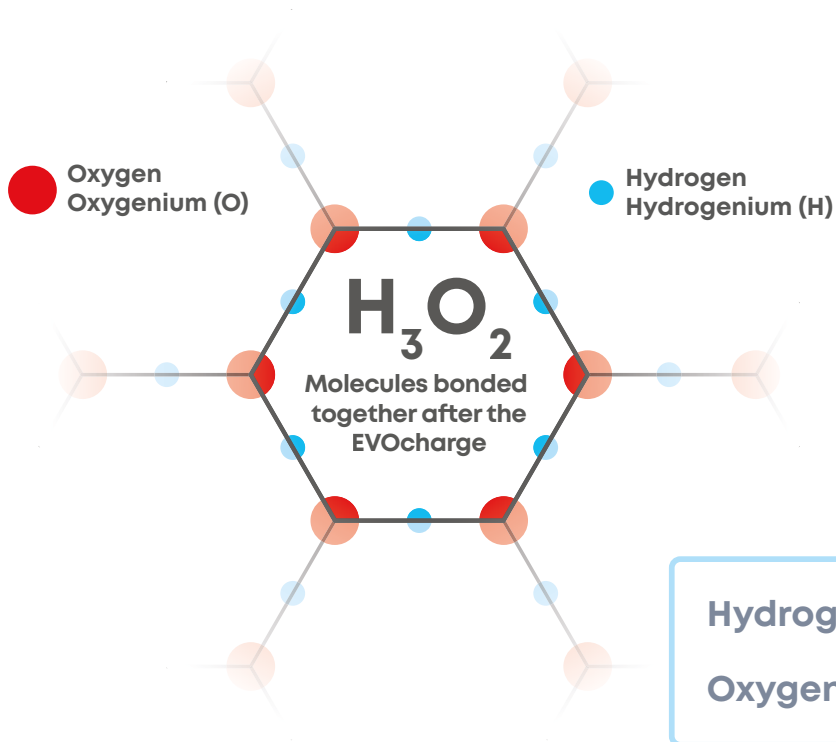

Water molecules consist of one oxygen atom and two hydrogen atoms (H₂O). The relationship between these two atoms gives water a unique electrical polarity. Accordingly, water is capable of binding its molecules together, which is called water structure (clustering).

Due to municipal water treatment and the related pressure our tap water is continuously exposed to, it comes in very large clusters, which bind to contaminants and other foreign substances.

The strong rotational force exerted on water in EVOcharge helps us reduce the so-called water clusters. Thus, the hydrogen/oxygen ratio is optimised, producing H₃O₂. This effect occurs in nature when water breaks its way through miles and miles of stream beds.

H₃O₂ for the best hydration

Hydrogen (H)  $1/2 \times 6 = 3$

Oxygen (O)  $1/3 \times 6 = 2$

Hydrogen	$3 \times (+1) = +3$
Oxygen	$2 \times (-2) = -4$

Total charge	-1
---------------------	-----------

Why H₃O₂?

H₃O₂ is the coherent structure of water. Studies by Nobel Prize winners Peter Agre and Roderick MacKinnon have proven that the intracellular water in human cells is structured in exactly this way.

Through the innovative rotation process in EVO-charge, the water takes on this coherent structure and supplies the cells with the necessary H₃O₂, which is negatively charged and thus provides our body with energy.

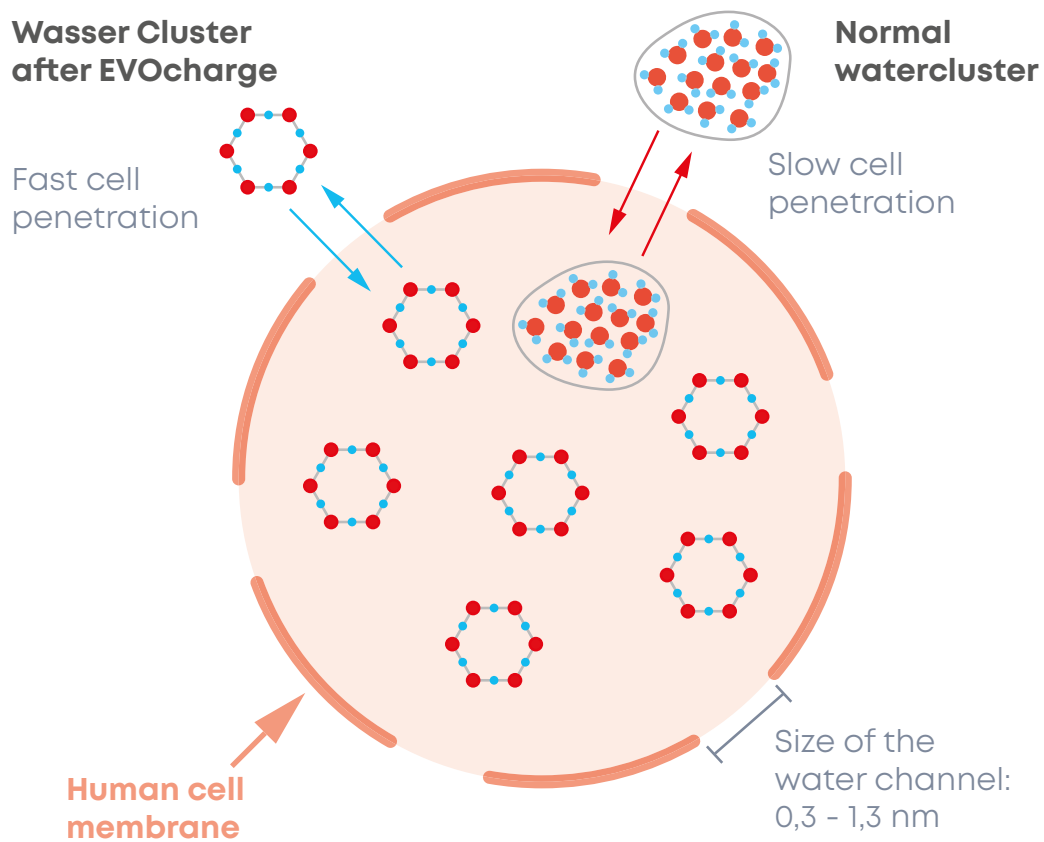

The body can process the refined water more efficiently and faster. Higher hydration also means more health and energy!

Scientifically tested and repeatedly proven

With the help of LifeVisionLab in Zurich (Dr Zina Pa-lic), Water Research Foundation (Dr Everine van de Kraats), Institut Dartsch Scientific GmbH (Professor Peter Dartsch) and Scientific Research Centre of Medical Biophysics (Professor Ignat Ignatov), we have managed to prove, among other things, the following:

- **Stable coherent structure (H3O2)**
- **Faster cell hydration**
- **Enhanced metabolic functions**
- **Anti-inflammatory properties**
- **Improved cell regeneration**
- **Reduced cell degeneration**
- **Surplus of electrons in water**

Your everyday benefits

Optimal thirst quencher

Smaller water clusters (bonded molecules) can permeate the cell membrane more easily, letting water get into cells quicker.

Fortify your immune system

Water becomes more conductive, which, above all, helps detoxify your body. Thus, your immune system and that of your family are strengthened.

Maximum bioavailability

The coherent structure of water after EVOcharge makes it possible for nutrients to be optimally absorbed in the body (bioavailability).

Better feeling of thirst

As you get quickly hydrated, you also feel thirst better. Your body responds to conditioned water extremely well, and drinking two litres of water a day is no longer a problem for you.

Energy boost

Water is the most efficient source of energy in the world – EVOcharge increases the flowing and dissolving properties of water, supporting all major metabolic processes of your body.

Full of fragrance

The increased dissolving power and improved structure of water significantly add to the original taste of food. Tea and coffee release their full flavour potential and cooking makes food taste stronger.

Soft taste

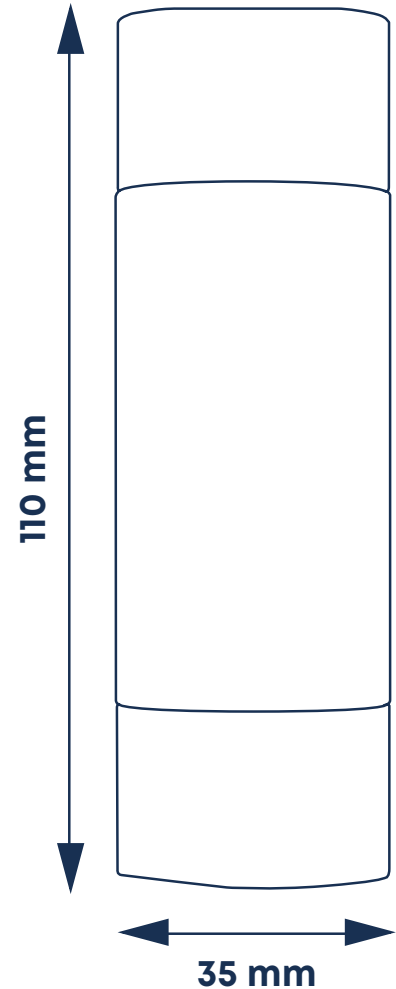

Water obtains a light and soft taste, becoming easy to digest. It does not sit heavily on your stomach, and provides a soothing refreshment.

Technical data

Total length	110mm
Diameter	35mm
Connectors	Inlet and outlet connections 1/4"
Installation	Drinking water installation according to DIN 1988
Material	Stainless steel, material no. 1.4401 and 1.4521 according to DIN EN 10088, DIN EN 10312, DVGW worksheet GW 541.

Made of 100% corrosion and erosion resistant materials according to ISO standard.

Completely maintenance free

EVOcharge does not need electricity or any other energy to operate. Made from materials resistant to corrosion and erosion, EVOcharge requires absolutely no upkeep or maintenance.

If you would like to make full use of EVOcharge's potential, water should be free of any contaminants and foreign substances. For this purpose, we recommend installing EVOfilter before EVOcharge.

SWISS MADE

We produce the EVOcharge entirely in Switzerland and use only the highest quality materials for production. We offer you a 20-year guarantee for this quality.
