Innovation and sustainability in water treatment redefined!

Your Swiss expert for filtered and limescale-free water in buildings

Descaling without salt, electricity and waste water!

1 EVOtransform

In this system, the water is rotated with patented rotating nozzles at around 100,000 revolutions per minute. The effect of this process has been scientifically substantiated and patented as state-of-the-art technology.

Thanks to this enormous physical force, the bound carbonic acid can be released into the water, stabilising the lime-carbonic acid ratio and guaranteeing that the malic acid can bind ideally with the mineral ions in the water. The free carbonic acid can break down and flush out existing deposits from the pipe system from time to time.

After treatment, the water also has increased conductivity and solubility, giving it a fine, soft flavour.

2 EVOdescale

With EVOdescale, thanks to the specially developed and patented malic acid complex, which is granular in the filter cartridge, a scale protection rate of up to 94.2% is guaranteed without the use of salt, wastewater, or electricity.

Unlike with crystal vaccines, swirlers, or magnetizers, the scale is not transformed; instead, it is eliminated from the water. The advancement through softening by means of malic acid allows for the harmless minerals, such as calcium and magnesium, to remain in the water. Obsolete softening systems with salt, however, cannot intelligently differentiate between useful minerals and annoying scale, and consequently, they remove both.

Malic acid is an organic component of apples. It is an essential intermediate in the energy generation cycle of living organisms and plants. As such, it is completely neutral, tasteless, and has been proven to have no negative effects on the organism. On the contrary, studies indicate that thanks to malic acid, minerals are now found in an organic bond.

With the additional filtration material in EVOdescale, heavy metals are filtered to protect against corrosion, and bacteria, as well as viruses, are eliminated from the water.

EVOhome

EVOdescale + EVOtransform

Groundbreaking descaling for limescale-free water combined with low maintenance costs.

94.2% Limescale protection

Additional advantages

- ✓ >99.9% germ barrier
- ✓ 100% rust protection

Refinement

- ✓ 50% increased cell availability
- ✓ More oxygen in the water
- ✓ Fresh mountain spring flavour

Filtrationsleistung

- ✓ Heavy metals
- ✓ Bacteria & viruses
- ✗ Microplastics
- ✗ Chlorine
- ✗ Pesticides
- ✗ Drug residues
- ✗ Fluoride
- ✗ Nitrates and nitrite

Environmental benefits

- ✔ No salt, no electricity, no waste water
- ✔ Massive energy savings

Advantages for residents

- ✔ Full spring water quality
- ✔ No more limescale problems
- ✔ Demonstrably healthier water thanks to high conductivity and solubility

Advantages for the building owner

- ✔ Halving of the renovation costs
- ✔ Extended service life of all water-bearing appliances
- ✔ Autonomous systems with very low maintenance requirements
- ✔ No additional costs from third parties
- ✔ All-in-one service from Evodrop - From planning to implementation

Thanks to Evodrop the annual costs for water treatment are reduced by over 50%.

Property size	Costs*	Maintenance costs per year*
1–3 units	3'500 CHF	from 399 CHF
4–7 units	from 5'800 CHF	from 798 CHF
8–11 units	from 8'100 CHF	from 1'197 CHF
12–15 units	from 11'600 CHF	from 1'596 CHF
16–19 units	from 13'900 CHF	from 1'995 CHF
from 20 units	on request	on request

*The prices quoted do not include installation costs. The exact product, maintenance and installation costs as well as maintenance intervals will be calculated for you without obligation based on the size of your property and the degree of hardness.

Tested and certified

Europe's largest safety certification for food contact materials.

The systems have been officially MOCA-certified, confirming that no harmful substances or germs are transferred in the water.

The most important certification for food, supplements and medicines in the USA.

The FDA (U.S. Food and Drug Administration) has confirmed that Evodrop systems do not release any harmful substances into the water.

ISO 9001 is the world's most popular management system for quality management.

Evodrop fulfils and implements the optimisation of customer requirements in its processes in the best possible way. This has been tested and certified according to the ISO 9001 standard.

Quote from the DVGW-accredited laboratory:

To summarise, it can be stated that the tests carried out in accordance with DVGW Code of Practice W 512 led to a significant reduction in limescale deposits in the test boilers. A calculated effectiveness factor of fW: 1.00 represents the highest possible value.

Quote from the internationally recognised testing institute CTI:

Evodrop's limescale protection corresponds to a high result and is therefore ideal for limescale treatment.
